THE REAL COST MEASURE IN CALIFORNIA 2025

The Real Cost Measure (RCM) estimates the minimum amount of income required to meet basic needs including the costs of housing, child care, food, transportation, health care, and taxes. Unlike the official poverty measure which is primarily calculated based on the cost of food adjusted for inflation annually, the Real Cost Measure takes into account geographical differences in the cost of living throughout California.

If any results show blank values, that indicates the sample size is too small to illustrate Real Cost Measure results. Per our methodology, estimates with a cell size of greater than 5,000 are assumed to be accurate within +/-1% based on design factor analysis. Cell sizes less than 5,000 are suppressed.
